                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Isoid=Q9QYH7-2; Sequence-VSP_003248;
TISSUE SPECIFICITY: Broadly expressed with higher expression in the stomach. Very low levels are detected in the hypothalamus, heart, lung, pancreas, intestine and adipose tissue.
PTM: O-n-octanoylation is essential for activity. The replacement of Ser-26 by aromatic tryptophan preserves ghrelin activity.
MASS SPECTROMETRY: MW-3314.9; MW_ERR-0.7; METHOD-Electrospray;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Hosoda H., Kojima M., Matsuo H., Kangawa K.;

-!- FUNCTION: Specific ligand for the growth hormone secretagogue receptor type 1 (GHSR) inducing the release of growth hormone from the pituitary. Has an appetite stimulating effect, induces adiposity and stimulates gastric acid secretion. Involved in growth regulation (By similarity).
-!- SUBCELLULAR LOCATION: Secreted.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              61 DGGQAEGAEDELEVRFNAPFDVGIKLSGVQYQQHSQALGKFLQDILWEEAKEAPADK 117

Submitted (MAR-2001) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Specific ligand for the growth hormone secretagogue receptor type 1 (GHSR) inducing the release of growth hormone the pitulatry. Has an appetite-stimulating effect, induces adiposity and stimulates gastric acid secretion. Involved in growth regulation (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                           PRINTS; PR01624; GHRELIN.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                MEDLINE-92069008; PubMed-1958665; MEDLINE-92069008; PubMed-1958665; Edmondson S., Khan N., Shriver J., Zdunek J., Graslund A.; The solution structure of motilin from NMR distance constraints, distance geometry, molecular dynamics, and an iterative full relaxation matrix refinement."; Blochemistry 30:1171-11279(1991).
-!- FUNCTION: PLAYS AN IMPORTANT ROLE IN THE REGULATION OF INTERDIGESTIVE GASTROINTESTINAL MOTILITY AND INDIRECTLY CAUSES RHYTHMIC CONTRACTION OF DODOBNAL AND COLONIC SMOOTH MUSCLE.
-!- SUBCELULAR LOCATION: Secreted.
-!- SIMILARITY: BELONGS TO THE MOTILIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This SWISS-PROT entry is copyright. -- CAPALYTIC ACTIVITY: ATP-dependent breakage, passage and rejoining of double-stranded DNA.
-- CAPALYTIC ACTIVITY: ATP-dependent breakage, passage and rejoining of double-stranded DNA.
-- SUBUNIT: Homodimer (By similarity).
-- SUBCELLULAR LOCATION: Nuclear (By similarity).
-- MISCELLANEOUS: EUKARYOTIC TOPOISOMERASE I AND II CAN RELAX BOTH NEGATIVE SUPERCOILS, WHEREAS PROKARYOTIC ENZYMES
-- SIMILARITY: Belongs to the type II topoisomerase family.
-- SIMILARITY: Belongs to the type II topoisomerase family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò
                                                                                                                                                 The invention relates to zsig33-like peptides and their corresponding nucleic acids and methods for modulating gastric contractility, nutrient uptake, growth hormones, secretion of digastive enzymes and hormones. The sequences of the invention are used in the prevention, diagnosis and treatment of diseases associated with inappropriate ZSIG33 expression. The nucleic acids of the invention and their complements are used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The ZSIG33 peptides are used as antigens in the production of antibodies against ZSIG33 and in assays to identify modulators of ZSIG33 expression and activity. The anti-ZSIG33 antibodies are also used as diagnostic agents for detecting the presence of ZSIG33 in samples (e.g. by enzyme linked immunosorbent assay (ELISA)). The peptides and nucleic acids of the invention are used to modulate gastric contractility, nutrient uptake, growth hormones, the secretion of digestive enzymes and nucleic acids of the invention are used to modulate gastric contractility, nutrient uptake, growth hormones, the secretion of digestive enzymes and nucleic acids of the invention are used to man asig33-like peptide is used in protein therapy. The present sequence and zsig33-like peptide. Zsig33-linker peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                         ZSIG33-Like peptides and polynucleotides, useful for modulating gastric contractility, nutrient uptake, growth hormones and/or secretion of digestive/pancreatic enzymes and hormones -

The invention relates to zsig33-like peptides (zS312P) including zsig33-linker, zsig33-beta, zsig33-gamma, zsig-33-delta and zsig33-linker, zsig33-beta, zsig33-gamma, zsig-33-delta and zsig33-linker, zsig33-beta, zsig33-gamma, zsig-33-delta and czsig33-like peptides and nucleic acid molecules encoding auch zsig33-like peptides. Zs312P peptides acid mulesurate the immune system in boosting immunity to infectious diseases, treating immunocompromised patients such as human immunodeficiency virus (HIV) patients, in mproving vaccines and in treatment of bacterial, viral, protozoal and improving vaccines and in treatment of bacterial, viral, protozoal and improving vaccines and in growth regulation in the liver, blood covessel formation of other developmental processes. They are useful for evaluating functions of hypothalamus-pituitary-adrenal axis, to modulate covessel formation of tumour cells, as additives to anti-chypoglycaemic preparations containing glucose and as adsorption channers for oral drugs which require fast nutrient action and to channers for oral drugs which require fast nutrient action and to channers for the expansion, differentiation, growth factor and hormone secretion and/or cell-cell interactions of tissues associated with gastrointestinal and growth related diseases. ZS312P peptides, nucleic cacids and/or antibodies are useful for treating dysfunction associated with gastrointestinal contractility, secretion of digestive enzymes, hormone and acids, secretion of hormones and acids, secretion of hormone and regulation of nutrient absorption. Sequences of the invention and regulation of nutrient associated sequences of the invention and regulation of nutrient associated sequences of the invention and regulation of nutrient sequence is human zsig33-linker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ghrelin; preproghrelin; GHS-R 1b; benign prostatic hyperplasia; therapy; breast; cervical; uterine; choriocarcinoma; prostate; ovary; cytostatic;
                                                                                                                                                                                                                                                                                                                                                                             nutrient

The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are concentration in cells. The peptides are ghrelin homologues and are characterised in that at least one manno acid has been substituted by a modified amino acid and/or a non-amino acid compound. The invention also encompasses the unmodified peptides; the DNA encoding the peptides comprising recombinant production, optionally followed by chemical modification; an antibody specific for a peptide of the peptides comprising are was and an assay and kit for detecting the peptides. The peptides of the invention are useful for treating and/or diagnosing diseases caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promoting infant growth due to growth commone deficiency. The compounds of the invention are safe with an accompanying side effects. The present sequence represents a ghrelin-type growth hormone secretagogue (GHS) precursor protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Zsig33; gastric motility; gastrointestinal inflammation; reflux disease;
nutrient absorption regulation; obesity; metabolic disorder.
                                                    New peptide compounds which induce growth hormone secretion and elevate cell calcium concentrations, useful in treatment and diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Length 116;

                                                                                                                                                                                                                                                                                    breast cancer, or benign prostatic hyperplasia, by detecting the expression of a ghrelin, an exon-3 deleted preproghrelin and/or a GHS-R 1b proteins or nucleic acids -
                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a method for identifying a cancer cell or tissue of the reproductive system by detecting expression of a ghrelin, an exon-3 deleted preproghtelin and/or a GHS-H lb proteins or nucleic acids. The antibodies, exon 3-deleted form of preproghtelin and antagonists are useful for treating cancer of the reproductive system such as prostate, ovarian, breast, cervical or uterine cancer, choricorarcinoma or benign prostatic hyperplasia. The present sequence is human exon 3-deleted ghrelin protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Growth hormone secretagogue; GHS; ghrelin; precursor; preproprotein; calcium concentration elevation; infant growth disorder; growth hormone deficiency.

The present sequence represents a protein designated Zsig33. The nucleic acids are strongly expressed in stomach tissue. The polypeptide (or allelic variants/orthologs) can be used to stimulate gastric motility, measured as increased transit time or gastric emptying of an ingested substance in mammals. The products are used to treat disorders associated with gastrointestinal cell contractility, secretion of digestive enzymes, gastrointestinal inflammation, reflux disease and nutrient absorption regulation. Zsig33 polypeptides may also be important neurologically, since the family of gut-brain peptides to which the homologous protein motilin belongs has been associated with neurological and CNS functions. They may therefore be used e.g. to regulate satiety cor treat obesity and other metabolic disorders where neurological eleback modulates nutritional absorption. They are useful to identify zsig33 agonists, antagonists and ligands and to produce antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; signal peptide-containing protein; HSPP; diagnosis; cancer; inflammation; cardiovascular disease; anticancer; anti-inflammatory; antimitorobial; nootropic; neuroprotective; cardiovascular; hepatotropic; antiasthmatic; gene therapy; cell proliferation; neurological disorder; reproductive disorder; developmental disorder; arteriosclerosis; cirrhosis; psorlasis; acquired immune deficiency syndrome; anaemia; asthma; Crohn's disease; infection; Alzheimer's disease; schizophrenia; Parkinson's disease; Huntington's diseases; ovulatory defect;

                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM3642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous injuries, parisher, and a localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral solerosis, and SNy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, arthritis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequence data for this patent did not form part of the printed

The invention relates to a method of forming a reversible peptide-
receptor complex that involves providing an immobilized receptor, and
contacting the receptor with a zsig33 peptide (Comprising residues 24-37
of AAB66549), where the receptor binds to the zsig33 peptide. The method
is useful for purifying cells, purifying a peptide, stimulating signal
contacting in a cell expressing a receptor. It is also useful for
modulating secretion of hormones, neural development and/or utilization,
gastric contractility, nutrient uptake, secretion of digestive and
contractility, nutrient uptake, secretion of digestive and
contraction of non-zsig33 proteins. It is useful for modulating growth
contraction of non-zsig33 proteins. It is useful for modulating growth
contraction of non-zsig33 proteins. It is useful for modulating growth
contraction of non-zsig33 proteins. It is useful for modulating growth
contraction of non-zsig33 proteins, it is useful for modulating growth
contraction of non-zsig33 proteins, it is useful for modulating growth
contraction of non-zsig33 proteins, it is useful for modulating growth
contraction of non-zsig33 proteins a set repair and remodeling,
controlling, low osteoblast levels, cartilage repair and remodeling,
controlling, lucose absorption and metabolism and neuropathy-associated
gastrointestinal disorders, and stimulating glucose-induced insulin
controlled, a peptide ligand for the G-protein coupled receptor, GHS-R.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SGIP; zsig33; anorectic; antidiabetic; somatotropin; somatomedin-C; nutritional absorption modulator; growth hormone secretagogue;

                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                 The present sequence is that of zsig33, a secreted protein with homology to motilin (see AAB20102). Zsig33 is expressed at high levels in the stomach, and at lower levels in the small intestine and pancreas. A novel peptide fragment of zsig33, termed SGIP (see secretagoque receptor, and is therefore useful for modulating secretion of growth hormone and insulin like growth factor 1. SGIP, and variant SGIP peptides, are used in claimed methods for stimulating contractability in duodenum or jedjunum tissue. SGIP, indudating pancreatic secretion of hormones and digestive enzymes, inducing growth hormone secretion, and modulating gastric emptying.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Growth hormone secretagogue; GHS; ghrelin; precursor; preproprotein; calcium concentration elevation; infant growth disorder; growth hormone deficiency.
                                                                                                                                                                                                 Novel variants of SGIP peptides for modulating contractility in duodenum or jejunum tissue, pancreatic secretion of hormones and digestive enzymes, inducing growth hormone secretion or modulating gastric emptying .
                                                                                                                                                                                                                                                                                                                                                                                                                                ö

The invention relates to a novel peptide compound or its salt which induces the secretion of growth hormone and/or elevates calcium ion concentration in cells. The peptides are ghrelin homologues and are characterised in that at least one maino acid has been substituted by a modified amino acid and/or a non-amino acid has been substituted by a anoified amino acid and/or a non-amino acid has been substituted by a calso encompasses the unmodified peptides; the DNA encoding the peptides comprising recombinant production, optionally followed by centrical modification; an antibody specific for a peptide of the invention; and an assay and kit for detecting the peptides of the invention are useful for treating and/or diagnosing diseases caused by a deficiency in growth hormone expression or activity. In particular, they are useful for promoting infant growth due to growth hormone deficiency. The compounds of the invention are safe with hormone deficiency. The present sequence represents a companying side effects. The present sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                New peptide compounds which induce growth hormone secretion and elevate cell calcium concentrations, useful in treatment and diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ghrelin-type growth hormone secretagogue (GHS) precursor protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Length 117;

The invention relates to zsig33-like peptides and their corresponding nucleic acids and methods for modulating gastric contractility, nutrient uptake, growth hormones, secretion of digestive enzymes and hormones. The sequences of the invention are used in the prevention, diagnosis and treatment of diseases associated with inappropriate ZsiG33 expression. The nucleic acids of the invention and their complements are used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The ZsiG33 methods are used as antigens in the production of antibodies against ZsiG33 and in assays to identify modulators of ZsiG33 expression and activity. The anti-ZsiG33 antibodies are also used as diagnostic agents for detecting the presence of ZsiG33 in samples (e.g. by enzyme linked immunosorbent assays (ELISA). The peptides and nucleic acids of the invention are used to modulate gastric contractility, nutrient uptake, growth hormones, the secretion of digestive enzymes and hormones, and/or secretion of enzymes and zsig33-like peptide is used in protein therapy. The present sequence is human zsig33 protein.
2.S.IG33-Like peptides and polynucleotides, useful for modulating gastric contractility, nutrient uptake, growth hormones and/or secretion of digestive/pancreatic enzymes and hormones -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; zsig33-like peptide; ZS33LP; immunity; developmental process; infection; human immunodeficiency virus; vaccine; antihypoglycaemic; adsorption enhancer; gastrointestinal disease; growth related disease; inflammation; gene therapy; growth regulation; blood vessel formation;

                                                                                                                                                                                                                                                                                 The present sequence represents human zsig33. The specification describes a short gastroIntestinal peptide (SGIP), which is derived from zsig33. SGIP has homology to mothlin. The SGIP peptide may be used in the prevention, diagnosis and treatment of diseases associated with imappropriate SGIP expression. For example, SGIP may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of SGIP by expressing inactive proteins or to supplement the patients own production of SGIP. SGIP may also be used as an antigen in the production of expression and activity. The anti-SGIP antibodies, agonists and anti-SGIP antibodies, agonists and anti-SGIP antibodies, agonists and anti-SGIP antibodies may also be used to regulate expression and activity. The anti-SGIP antibodies may also be used as diagnostic agents for detecting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; zsig33-like peptide; gastric contractility; nutrient uptake;

                                                                                                                                                                                                                                                                                                                                                                                     05-0CT-1999
                                                                                                                                                                                                                                                                                                                                                                                                                 30-NOV-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                            01-DEC-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                            01-DEC-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        02-DEC-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      16-DEC-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   20-DEC-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            30-DEC-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          24-FEB-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       02-MAR-2000
   The invention relates to zsigi3-like peptides (zsijip) including 234gi3-linker, zsigi3-beta, zsigi3-gamma, zsigi3-delta and 234gi3-linker, zsigi3-beta, zsigi3-gamma, zsigi3-delta and csijip peptides and nucleic acid molecules encoding such zsigi3-like peptides. Zsijip peptides activate the immune system in boosting immunity to infectious diseases, treating immunocompromised patients such as human immunodeficiency virus (HIV) patients, in improving vaccines and in treatment of bacterial, viral, protozoal and fungal infections. Peptides of the invention are used to identify and isolate receptors involved in growth regulation in the liver, blood vessel formation and other developmental processes. They are useful for evaluating functions of hypothalamus-pituitary-adrenal axis, to modulate growth and/or differentiation of tumour cells, as additives to anticrepators for oral drugs which require fast nutrient action and to stimulate glucose-induced insulin release. They are also useful as cessarch reagents for the expansion, differentiation, growth factor and charmone secretion and/or cell-cell interactions of tissues associated with gastrointestinal system, brain and central nervous system. These conteactine useful for treating dysfunction associated with canterial sortex of treating disorders associated with gastrointestinal and growth related diseases. Zsizup peptides, nucleic acids and/or antibodies are useful for treating disorders associated with gastrointestinal and growth related diseases. Zsizup peptides, nucleic acids and/or antibodies are useful for treating disorders associated with gastrointestinal motility, recruitment of digestive enzymes, inflammation contractility secretion of hormone and acids, secretion of hormone and acids, secretion of hormones of the hormone are useful in gene therewer the engage of the expansion of hormone and acids, secretion of hormone and acids, secretion of hormones in the pancreas and/or antibodies are useful secundance of the hormone and acids, secretion of hormone and aci
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                        New polypeptides, useful for modulating gastric contractility, nutrient uptake, pancreatic secretion of hormones, digestive enzymes and treating gastrointestinal and growth related diseases, comprises ssig33-like peptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                useful in gene therapy. The present sequence is human zsig33 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

                                                       THE STATE OF THE S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to the isolation of novel human PRO polypeptides, and the polynucleotide sequences encoding them. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides are useful for detecting other PRO polypeptides, for inking bloactive molecules to cells expressing PRO polypeptides, for inking bloactive molecules to cells expressing PRO polypeptides, and for for identifying agonists or antagonists. The PRO polypeptides are useful for for stimulating the release of tummour necrosis factor (TNF)-alpha from human blood, for stimulating the presence of tummours. The polynucleotide sequences encoding PRO polypeptides are useful as hybridisation probes, in chromosome and preparation of PRO polypeptides, for generating transgenic animals or knockout animals, for the generation of anitsense RNA and DNA, in the preparation of PRO polypeptides, for generating transgenic animals or knockout animals, for the genetic analysis of individuals with genetic disorders, and in gene therapy. ABU66570-ABU66844 represent the human PRO polypeptides of the invention.

Note: The sequence data for this patent was obtained in electronic formation and dispersed the formation and threefolds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

New secreted and transmembrane nucleic acids and polypeptides, designated as PRO, useful for treating inflammation, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, AIDS, or cancer

## Claim 12; Fig 442; 659pp; English.

The invention relates to an isolated nucleic acid comprising, or which is at least 80% identical to, or the full-length coding sequence of, any of the 275 nucleotide sequences, encoding the corresponding PRO polypeptide (one of 275 secreted or transmembrane proteins). The nucleic acid further comprises the full-length coding sequence of the DNA deposited

under American Type Culture Collection (ATCC) accession number in a list given in the specification. Also included are vectors and host cells for producing PRO proteins, PRO fusion proteins, anti-PRO antibodies, PRO extracellular domains and mature sequences, methods of detecting PRO proteins, methods for stimulating the release of TNF-alpha (tumour necrosis factor alpha) from human blood, and the proliferation of differentiation of chondrocyte cells, the proliferation of or gene expression in pericyte cells, the release or proteoglycans from cartilage, proliferation of finer car utricular proteoglycans from cartilage, proliferation of finer car utricular proteoglycans from peripheral blood mononuclear cells (PBMC), or the proliferation of endothelial cells), a method for modulating the uptake of glucose or free fatty acid (FPA) by skeletal muscle cells, a method for inhibiting the binding of A-peptide to factor VIIA, a method for inhibiting the binding of A-peptide to factor VIIA, or the differentiation of adipocyte cells, a method for detecting the proliferation of adipocyte cells, a method for detecting the properties are useful for treating inflammatory diseases, organ polypeptides are useful for treating inflammatory diseases, organ diabetic complications. The nucleic acids are useful a shybridisation. ö probes, in chromosome and gene mapping, and in generating antisense RNA or DNA. The polypeptides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. Both are useful in tissue typing. The present sequence represents a PRO protein of the invention.
